

OUR STUDY DESIGN

Wave 1 (2018-19) Age 0-6

Wave 2 (2021) Age 2-8

4,352 children in 3,016 households
Response rate = 87% (During Covid-19)

Wave 3 (2025) Age 6-12

Recontacting all 3,476 families at baseline

HOW DO WE COLLECT DATA?

- ✓ In-home surveys
- ✓ Child assessments
- ✓ Small-group parent-child activities

ALL data and personal information collected from participants will be kept

STRICTLY CONFIDENTIAL.

WHAT DO WE STUDY?

SG-LEADS is a longitudinal study, started in 2017, that aims to:

- (a) Learn about Singapore children's development

- (b) Understand how environment influences children's development

WHAT QUESTIONS DO WE ANSWER?

- ✓ How do family relationships and resources shape children's development?
- ✓ How do schools and friends affect children's growth?
- ✓ How does growing up with parents from different cultural backgrounds affect children's development?
- ✓ Can we teach children cooperation?
- ✓ How do TV, Internet, cell phones or other media use influence child development?

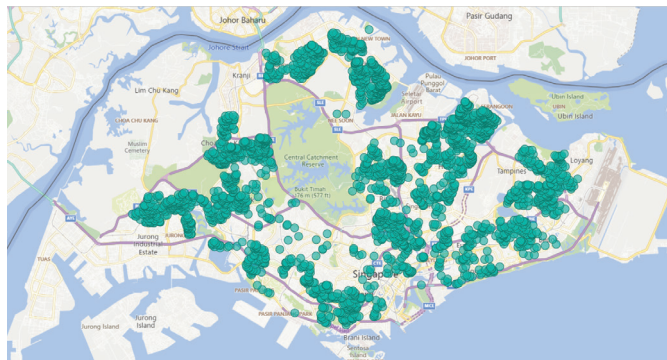

BENEFITS OF THE STUDY

- ✓ Learn more about how children develop and factors that promote or impede healthy and holistic child development
- ✓ Contribute to the knowledge pool on Singapore children's early development
- ✓ Help policy makers and practitioners to address challenges for children in Singapore in order to reach their full potential
- ✓ Monetary incentive and token gifts for participants of the study
- ✓ Participants will receive reports about Singapore children's early development

WHO ARE IN THE STUDY?

- ✓ 5,005 children and their primary caregivers
- ✓ Our sample was selected randomly from a population list to represent Singapore resident households that have children under 7 years old in 2018
- ✓ We track the development of the same families and children selected in 2017

WHERE ARE SG-LEADS FAMILIES?

WHO ARE WE?

SG-LEADS is currently housed in the A*STAR Institute for Human Development and Potential (IHDP). Our team is cross-institution and multiple-disciplinary.
